

METO Systems Column Lifts

A Partner To Rely On

Innovative material handling products servicing regulated manufacturing industries.

Column Lifts are used for many applications in the manufacturing industry requiring lifting and repositioning of a variety of machines, containers, IBCs, FIBCs, and drums.

For more than 50 years, METO Systems, Inc. has been a leading supplier of process and material handling equipment for a variety of industries, including food, fine chemical, nutraceutical and pharmaceutical.

Our column lifts provide simple, reliable, ergonomic solutions that ensure the safety of the operator when heavy loads need to be lifted and handled.

Rugged, Reliable Design

METO Systems equipment is designed for reliable service over many years, our solutions can run 24/7/365 with minimal routine maintenance. High quality components are used throughout, and our stainless steel structures are just that—all stainless steel, no stainless steel cladding materials are used.

Installation Savings

All METO Systems equipment is configured to provide you with a complete system with little or no need for any on-site assembly.

Detailed Engineering Support

Have a tough application? Not sure how you will fit it into your facility? METO Systems' engineering department will provide you with system layouts for your project in advance of any purchase.

Fast Delivery

METO Systems modular design philosophy offers the shortest lead times for custom equipment in the industry.

Expert Service

Need assistance with installation? Start-up? Training? Preventive Maintenance?

All service personnel are fully qualified and factory trained. In most instances, our technicians are dispatched directly from our factory in New Jersey and will have access to all of your machine history from the very start of its assembly.

Stationary Column Lifts & Equipment Positioners

Floor mounted and either ceiling or wall supported, our line of column lifts and equipment positioners can do it all. From raising mixing vessels that need some discharge head room to the repositioning of equipment for cleaning. Our platform lifts also include options for a variety of interlocked gates and barriers, making them safe, secure and ready to access any process area. Our M2000 Series can handle loads of up to 2000 lbs while our M5000 series are for heavy duty, 5000lbs loads. We can integrate controls and full functionality into the process so you only need to use one HMI.

304 stainless steel construction; generally fixed in position; interlocked controls; safety options include audio visual alarm, laser scanners, gate sensors, external locks, physical barriers.

Mobile Equipment Positioner

METO Systems offer the option of a portable equipment positioner, to help elevate equipment when a vertical process flow is required such as lifting a machine until it is in line with a mixing tank. The units are versatile and easy to maneuver in a difficult process space.

304 stainless steel construction, custom designed end effectors, extended reach or lift option, equipped with abrasion-resistant polyurethane wheels.

Mini Utility Lifts

For smaller scale, light weight applications, we suggest our mini utility lift series. These lifts are light weight and portable, for handling loads ranging from 100kg to 180kg depending on the end effector needed. Their smaller foot print allows them to be used in tight spaces in order to position them as required without obstructing neighboring equipment such as high shear mixers or process screening equipment.

304 stainless steel construction, portable or floor mounted, ideal for moving cartons, drums, various small tools and equipment. With the addition of custom forks also capable of handling rolls, coils, or paper bags.
